ALMANACK
for the Year of our
LORD GOD
1707.

Being the 3d after Biſſextile or Leap-year, and from the Worlds Creation, 5656.

Wherein is contained the Lunations, Conjunctions and Aſpects of the Planets, the increaſe, decreaſe and length of the day and night, with the riſing, Southing and ſetting of the Planets, and Fixed Stars throughout the Year, whereby may be known the exact hour of the night at all times, when either the Moon or Stars are ſeen.

Calculated according to Art and referred to the Horizon of the ancient and renowned Borrough-Town of *Stamford*, whoſe Longitude is 24 deg. 20 min. and Latitude 52 deg. 41 m. ſitting all the middle Counties of ENGLAND, and without ſenſible errour the whole Kingdom.

By *JOHN WING*, Mathemat.

CAMBRIDGE,
Printed for the COMPANY of
Stationers. 1707.

k.
Hemerides

Common Notes for this present Year, according to the

Julian, Englisb or old account.		*Gregorian* or new account
17	The Golden Number	17
8	The Cycle of the Sun	8
18	The Epact	7
C	The Dominical Letters	B
15	The Roman Indiction	15
23	The Number of Direction	26

The Terms and their returns this Year.

Hilary Term begins January 23 and ends February 12, and hath 4 returns, *viz.*

- Octab. Hilar. January
- Quind. Hilar. January
- Craft. Purif. February
- Octab. Purif. February

Easter Term begins April 30, and ends May 26, and hath 5 returns

- Quind. Pasch. April
- Tres Pasch. May
- Mens. Pasch. May
- Quinq; Pasch May
- Craft Ascen. May

Trinity Term begins June 13, and ends July 2, and hath 4 returns.

- Craft. Trin. June
- Octab Trin. June
- Quind. Trin. June
- Tres Trin. June

Michaelmas Term begins October 23, and ends November 28, and hath 6 returns.

- Tres. Mich. October
- Mens. Mich. October
- Craft. Anim. November
- Craft. Mart. November
- Octab. Mart. November
- Quind. Mart. November

Good are the Laws if they be right apply'd,
But from them often Lawyers step aside.

The Bright and Glorious Planet *Venus* is our Evening star ti *Jan.* 18. from thence to *Novemb.* 1. she shines in the Morning rom thence our Evening star to the end of the Year.

A Table of Simple Interest at Six per Cent.

Shillings

Pounds

THis Table shews the Interest of any sum of Money from 1 *s.* to 100*l.* from a day to a year. And by the help of Addition you may compute the Interest of any sum whatsoever. And note, that for the greater exactness the peny is divided into a 100 parts, so that 25 parts are a farthing, and 50 parts an half-peny, and 75 parts 3 farthings, *&c.*

Example 1

The Interest of 100 *l.* for six months one Week and one day, is thus found by the Table.

		l.	*s.*	*d.*	*q.*		
Interest of 100 *l.*	for 6 mon.	03	0	0	00	*l.*	*s.* *d.*
	for 1 week,	00	2	3	61	*viz.* 3	2 7 half-peny
	for a day,	00	0	3	94		
		03	2	7	55		

A Regal Table in a more exact manner.

Here Gods Vicegerents do in order ſtand
And how ſucceſſively each Rul'd the Land,
May we not want a Monarch great indeed
Wiſe, good, and gratious, merciſull in need:
For ſuch a one may all good Chriſtians ſtand
Both now and always for to Rule this Land.

1707.

Quadrans a quarter of a part.

∫ for semis, half; and d for Denarius three quarters of a part.

To find the true Hour of the Day by the former Table.

-Ake a Staff of what length you pleaſe, and with a pair of Compaſſes divide it into ten equal parts marking em upon the Staff; then in ſome level place where the n doth ſhine, ſet it upright, and mark where the end the ſhadow falls; which done, meaſure with your Staff e length of the ſhadow, and note the parts it contains, ich find out in this Table right againſt the day of e month, and over head you will find the true hour the day; as will appear more clearly by example.

Suppoſe the 9 of *April* or 13 of *Auguſt* I ſhould find e ſhadow of the Staff to be 30 parts and a quarter of part more, that is, three Staffs length, and a quarter a part, therefore ſeeking in the Table, againſt the ſaid ys, I find 30 *q.* which is 30 parts and a quarter, and ce over head that it is then either 7 a clock in the rning, or 5 in the afternoon; ſo that if your obſerva- n was in the morning, it was 7; but if in the after- on, 5 a clock.

Thus the 13 of *February*, or 8 of *October*, if the ſha- of the Staff be juſt 19 parts, it is 12 a clock. if it's one a clock. if 24 two a clock, if the obſerva- n be made in the afternoon.

Thus you ſee the hour of the Day is exactly and ſpeedi- found, by a Rod or Staff and the help of this Table; likewiſe by the Kallender part may the hour of the ght be known either by the Moon, Planets, or Fixed s, being of excellent uſe to all ſorts of Men.

A Compendious Chronology of Memorable things since the Creation to this Year 1707.

From the Creation of the World. *Juxta* Years.

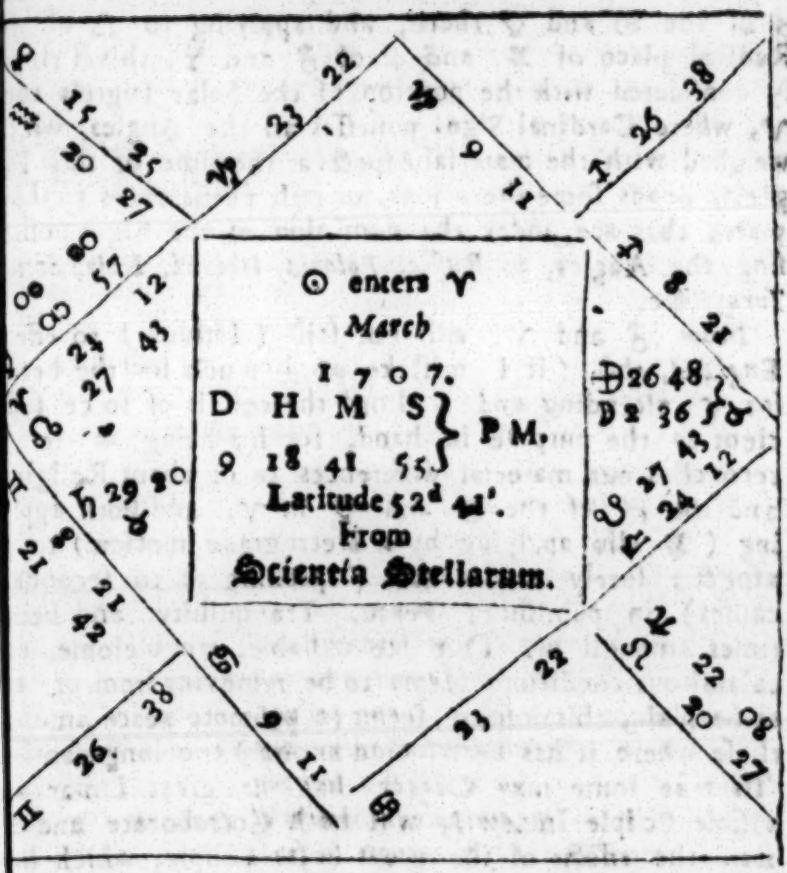
Why, asks Minerva, *what moſt want to know,*
How things ſhall waddle on this Orb below,
Why th' Times are bad, and troubles on us brings,
That comely Bird Content, hath made her Wings;
She's taken flight unto another place,
And drawn her ſelf into a Narrow ſpace,
Nor can't be view'd, as formerly ſhe's been,
Theirs very few her favour now can win.
Courtſhip ſeems comely, favour proves but vain,
'Tis eaſie loſt, but ſeldom turns again.
Plain dealing too ſeems like a looking-glaſs,
Nay rather like the pale cut wither'd graſs.
A real Friend is hard enough to find,
Yet not ſo hard as ſuch as proves unkind.
There's two to one, nay plenty in degree
Of Trimmers, Turncoats, more than honeſty;
Of Frauds, Deceits, and Villanies ſo courſe,
And thus by cuſtom our bad World grows worſe.

Of the Spring Quarter.

THE Spring quarter or Revolution of the Year, always its beginning when the Glorious Lamittle t
Heaven the Sun enters into the firſt point of the ppoſiti



rnal Sign *Aries*, which will be this preſent Year on
nday the 10th. day of *March* 41 min. 55 ſeconds
6 in the morning, the poſition of the Heavens
n being as this Scheme demonſtrateth.

The Prevential Full Moon happens the 7 Day 30
utes paſt 9 in the morning, at which time 8 degrees
ascends, and 17 of ♎ Culminates; the poſtven-
al New Moon is the 22 day 32 min. paſt 6 at night;
n 13 degrees of ♎ aſcends, and 17 degrees of ♋
n the Midheaven, in the preventional Full moon there
ittle to be Obſerved, thô the latter happens nearly
pposition (in reſpect of the Angles) to the Figure

of the Radix, and the Moon very near the place of the ☌ of the ☉ and ☿ there, and applying to △ of the Radical place of ♆, and ✶ of ♂ and ♀, this if rightly considered with the position of the Solar Ingress into ♈, where Cardinal Signs possesses all the Angles, which weighed with the material Aspects at the time of this Ingress, boads some alterations, or rather differences to those places that are under the dominion of the Signs possessing the Angles, as *Russia*, *Polonia*, *Ireland*, *Italy*, *Sicily*, *Turky*, &c.

Now ♂ and ♈ will not fail (I think) to effect *England*, thô (if I mistake not) much for the better for ♈ ascending and ☿ Lord thereof is of force sufficient to the purpose in hand, for his being ✶ to ♆ reconciles our material differences in or about Religion, and the ☌ of the ☉ and ☿ in ♈, and both applying (♆ also applying by a Retrograde motion) to △ aspect; surely cannot fail (speaking as to secondary causes) in publishing Peace, Tranquillity, and better times amongst us. Our late unstable, troublesome, and calamitous condition, seems to be removing from us and to be plain, this position seems to promote peace amongst those where it has been (God knows) too long wanting. 'tis true some may Object that the great Lunar and visible Eclipse in *April*, will both Corroborate and hasten the effects of the great Solar Eclipse, which happenned *Mayday* 1706, which several Astrologers has drawn no good Conclusions from, according to the Principles of *Ptolomy* and others, and thô as I have great reason to hope, there will be a Scheme drawn for peace, some Obstructions and differences must be expected, thô I hope not of force sufficient to destroy it. The □ of ♄ and ♆ from ♉ and ♌ foments and heightens the difference between two Northern Princes; let *Sweedland* beware, there is something very materiall will happen to that Country, which will be of ill consequence to that Kingdom if not timely inspected, for the great Solar Eclipse that was *Mayday* 1706. heightens the Malig-

nity of what I juſt before treated of; neither do I deny but ſeveral other parts will ſhare in the effects as well as *Sweedland*, though in the Southern parts (I judge) the Sword hath partly done devouring at preſent, the weight of theſe Wars has been felt ſome time, and thô born with ſome ſeeming patience, hath brought its effect home with it at laſt. I ſhall conclude with this incouragment to my Country-men, that there is a proſpect (according to Starry Influence) of ſeeing and enjoying better times again here, and that this preſent Year will prove both healthful and of great plenty of the fruits of the Earth, if we do not provoke God by our repeated provocations, to alter the courſe of Nature, and to withdraw his mercies from us.

Mr. *Streets* Tables makes this Solar Ingreſs to be 24′ 18″ ſooner,

Of the Summer Quarter.

THE Summer Quarter is always ſaid to begin when this our Earthly Globe inclining Southward 23 degrees, 29 minutes towards the Sun, will Volve and remove us her Northern Inhabitants to the greateſt portion of day, or when the Sun (according to appearance) enters the firſt ſcruple of ♋, which either way taken, falleth this Year on *Wedneſday* the 11th. day of *June* at 3 min. 47 ſeconds, paſt 7 in the morning, but by the *Caroline* Tables 16′ 27 ſec. later according to the former time the Planets places are as followeth, ♄ 10° 26′ 34″ ♊. ☿ 26° 47′ 57″ ♌. ♂ 14° 23′ 38″ ♌. ♀ 24° 7′ 42″ ♍ 16° 42′ 25″ ♎. ☽ 20° 8′ 42″ ♐. ♃ 22° 45′ 37″ ♈. At the time of this Ingreſs 9 degrees of ♌ aſcends, and 18 degrees of ♈ is on the Midheaven, ☿ and ☌ in ♂ in the Regal Sign ♌ in the Aſcendant, and ♄ and ♀ ☍ in the 11 houſe in ♊ and in ☌ to the former, theſe Conſigurations are

of

of a healing nature, and foreſhews great things to be done amongſt ſeveral of the Grandees of the World, and yet ſome little diſcontent will ariſe amongſt the vulgar people, which the Moons poſition in this Scheme lively repreſents.

Of the Autumn Quarter.

THE Autumn or Harveſt Quarter beginneth at ſuch time as the Sun toucheth the firſt Scruple of the Equinoctial Sign ♎, or more really when the Earth enters ♈, hath Volved her ſelf at right Angles to the Sun, and receiveth a like portion of light and darkneſs, which either way taken, happens this Year on *Friday* the 12 day of *September*, 13 min. 12 ſeconds paſt 8 at night, but by the *Caroline* Tables 50′ 48″ later, acording to the former ♄ is in 18° 0′ 20″ ♊. ♆ 15° 36′ 28″ ♍. ♂ 13° 28′ 35″ ♎. ☿ 17° 23′ 11″ ♍. ♀ 12° 23′ 12″ ♍. ☽ 3° 30′ 31″ ♍. ☊ 17° 48′ 58″ ♈, according to the firſt time here ſtated 4 degrees of ♊ Aſcends the Eaſtern ſinitor and 1 degree of ♒ Culminates, ♄ and ♂ are in △ from ♊ and ♎, and brings good tydings to our Metropolitan *London*, as well as to Old *England* in general, though ♄ is in quartile Aſpect to ♆, ☿ and ♀, who are all conjoyn'd in ♍, which produces no good to ſome of the long Robe, it is hardly to be imagined what the minds of ſome very ill Men will extend to againſt our Reformed and Sacred Liturgie. But God be praiſed, we now live under the protection of as good and gracious a Queen as ever any people did, let ſuch therefore conform and live peaceably and quietly, leſt (too late) they repent it.

Of the Winter Quarter.

THE laſt Quarter call'd Winter makes its entrance at ſuch time as our Earthly Globe by its Circumvolation hath

hath Volved it ſelf to the greateſt Northern inclination, whereby we being fartheſt deflected from the Suns Rays receive leaſt light, and cauſes our ſhorteſt day and longeſt night, or (according to appearance) when the Sun enters ♑, which either way taken, falls this Year (according to *Scientia Stellarum*) on *Thurſday* the 11 day of *December* 30 min. 27 ſec. paſt 10 in the morning, but according to Mr *Streets* Tables 6′ 45″ later. At which time and Tables firſt mentioned 12 degrees of ♎ Aſcends, and 9 degrees of ♐ is on the Midheaven, and ♄ in 13° 19′ 15″ ♊. ☿ 0° 11′ 38″ ♎. ♂ 16° 2′ 20″ ♐. ♀ 9° 4′ 30″ ♑. ☉ 6° 7′ 4″ ♑. ☽ 11° 11′ 38″ ♐, ☊ 13° 4′ 11″ ♈.

Of the Eclipſes this Year 1707.

THere will happen to the Earths Inhabitants this preſent year Six Eclipſes, and yet but one (and that a Lunar one too) will be viſible here in *England*, and they happen in this following order.

The firſt is a ſmall Eclipſe of the Sun, the Middle time whereof, is about the time of Sun-ſetting, on the 22 day of *March* to be ſeen in the Southerly parts of the Earth.

The ſecond is a Total and Viſible Eclipſe of the Moon, on the 6th of *April* in the morning, of which ſee the following Calculation.

The Calculation.		S D	D H	′	″
The middle time of the true ☌	*April*	5	13	26	46
The Suns true place		♈	26	19	14
The Moons Eccentrick place		♎	26	19	14
The Moons Node ſubſtract		0	26	16	14
The Argument of Latitude		6	00	03	00
The Equation of time add				7	41
The apparent time of the true ☌	*April*	5	13	34	27

Sum

Sum of Horozontal Parrallaxes ☉ and ☽		53	52
The Suns semidiameter subtract		16	16
Apparent semidiameter Earths shaddow		37	43
The Moons semidiameter Add		14	56
The sum of the Semidiameters		52	36
Moons true Latitude So. Ascend. sub.		0	36
The Scruples Deficient		52	00
The Digits Eclipsed 20° 50′ 28″	20	50	18
The Scruples of Incidence		52	36
The time of Incidence	1	54	08
The total Duration	3	48	16
The Continuance of total Darkness	1	38	34

Hence	h	′	″	
The Beginning is *April* 5 day at	11	40	19	night.
Beginning of total Darkness 5 day at	12	45	10	night.
The middle *April* the 6th. at	1	34	27	morn.
End of total Darkness at	2	23	44	morn.
End of the Eclipse	3	28	35	morn.
Latitude ☽ at the beginning	4′	22″	No.	Descend.
Latitude ☽ at the end	5′	35″	So.	Ascend.

The Third is a small invisible one of the Sun, *April* 21 at 2 in the morning.

The fourth is a very small Invisible one of the Sun, *September* the 14th. near midnight.

The Fifth is a great Invisible Eclipse of the Moon, on the 30 day of *September* at high noon, which falls exactly in the Meridian of our Antipodes, which will be very conspicuous there, and parts thereto adjoyning

The Sixth and last is an Eclipse of the Sun upon the 14th. day of *October* near 3 Afternoon, but cannot be seen here in respect the South Latitude of the Moon is increased by her Parrallax.

Of the Conjunction of ♆ *and* ♂.

ON the 5th. day of *July* this preſent year happens a famous Conjunction of ♆ and ♂ in 1° 54′ 17″ ♍ at 33′ 36″ paſt 10 at night, at which time the Latitude of ♆ is 1° 1′ 56″ North, and the Latitude of ♂ 1° 3′ 38″. Hence ♂ is Elevated above ♆ 1′ 42 ſec. According to the Tables in my *Scientia Stellarum* they being then Evening Stars, and the difference of Latitude ſo ſmall, that they will ſeem almoſt to touch one another which will be a curious Appearance to Obſerve by all ſuch as are Friends to this Noble Science.

The Tables in *Aſtronomia Carolina* makes this Conjunction at 6 h. 50′ 53″ p m. the ſame day in 1 ho. 43′ 35″ ♍. differing in time 3 ho. 12′ 43″, and in Longitude 0° 42′, from which Tables the Latitude of ♆ is 1 h. 0′ 48″, and of ♂ 1 h. 4′ 2″ North ſo that ♂ by theſe Tables ſhould be Elevated 3′ 33″ above ♆; which Calculation was performed by my Friend Mr. *Joſeph Pepper* Writing Maſter in *Stamford*, who gave me the Calculation at large, but my Room would not admit of inſerting of it here.

Now thoſe that has a deſire to know which Tables comes neareſt the truth, and are furniſhed with parts and inſtruments, may do well to make Obſervation hereof (if the Air be clear) and communicate it, which might be of good uſe towards the further Rectification of theſe two Planets places.

Of

Of the proper Motion (and other conclusions) of the Fixed Stars.

THE Motion of the Fixed Stars is twofold, *viz.* 1ſt. *Motus Vertiginis*, or the Circumrotation about their own Centers, in which they are carried with wonderful Celerity, which muſt needs be very natural, if we conceive it according to Dr *Burnet's* Hiſtory of the Conflagration. Their ſecond Motion or Revolution is from Weſt to Eaſt, which is very ſlow tho Uniform and equal in all Ages, their Annual motion is found 50″ 24‴ according to the limitation of the lateſt and beſt Obſervations, which I have made uſe of in framing my new Solar Tables, according to which it follows, that they complete but one degree in the Ecliptick in 71 years, 5 months, 7 days and 12 hours, ſo that they run the Circle of 360 degrees in 25714 years, 3 months, and 15 days, which is the *Annus Magnus Platonicus*, which the Ancients extended to 36000 years. But the Ancients (and indeed ſeveral of our Modern Writers) have groſly miſtaken their Diameters, and true diſtances from the Sun and Earth, with their ſolidity, &c. by reaſon of making uſe of a Paralax in the Fixed Stars ariſing from the Earths Motion, which moſt Authors have allow'd to be 10″, which has much leſſen'd the diſtance of the Fixed Stars both from the Sun and Earth, but later and better Obſervations plainly proves that no ſuch Parallax ought to be admitted, for 't is plain that no Annual tranſferring of the Earth through the 12 Signs of the Zodiack never cauſed any diverſity in the Elevation of the Pole ſtar, or any other of the Fixed Stars, which it neceſſarily muſt have done, had the Fixed Stars been found to have a Parallax of 10′, which no doubt the Ancients did believe, whereas now we are aſſured that the Sun's greateſt Horizontal Parallax is no more then 10′, and from the motion of the Fixed Stars here limited I ſhall Exhibit a Table of 28 of the moſt eminent Fixed Stars Calculated for the Firſt day of *January* 1710

n Longitude, Latitude, R. A. and their Semidiurnal rches of Excellent use in finding the Rising, Southing, nd Setting of the Fixed Stars.

Names of the Stars.	Longitud. S	o	'	Latitude o	'	"		R. Ascen. h	'	"	S. d. Ark. h	'	"
Mid. ✳ of Plcia.	♉	25	5	4	0	N		3	30	12	8	10	20
Ald baran	♊	5	43	5	31	S		4	19	15	7	22	40

Head of Andromed.	♈	10	18	25	42	N		11	53	10	8	23	5
Girdle of Androm.	♈	26	20	25	59	N		0	53	21	9	52	14
Schedir	♉	3	48	46	3	N		0	24	27	Sets not.		
Head of Algol	♉	22	8	22	22	N		2	49	15	Sets not.		
Rigel	♊	12	48	31	11	S		5	1	11	5	6	13
Mid. of Orions Belt	♊	19	25	24	33	S		5	17	31	5	55	11
Sirius	♋	10	6	39	40	S		6	33	13	4	34	19
Procyon	♋	21	49	15	57	S		7	34	11	6	25	20
Præcepe	♌	8	17	1	14	N		8	23	32	7	55	51
Head of Hydra	♌	23	16	22	14	S		9	13	21	5	22	25
Tail of Leo	♍	17	34	12	18	N		11	34	27	7	27	19
Vindemiatrix	♎	6	46	15	15	N		0	48	13	7	5	21
Arcturus	♎	20	10	31	2	N		2	3	25	7	55	10
Lucida Corona	♏	8	9	44	23	N		3	23	15	Sets not.		
Head of Hercules	♐	12	2	37	23	N		4	59	9	7	18	17
Shining Harp	♑	11	14	61	47	N		6	28	17	ets not.		
Fomahant	♒	29	42	21	0	S		10	41	22	2	40	11
Merchab	♓	19	27	19	26	N		10	50	24	7	8	1

By the former Table to find the exact time of the Rising, Southing and Setting of any of those Fixed Stars.

FRom the Right Ascension found in this Table Substract the Right Ascension of the Sun, the Remainder is the true time of Southing.

EXAMPLE.

This present Year 1707, *May* 11 day, I would know what hour and minute the Virgin Spick comes South.

	h	'	"
Right Ascension V. Spick (12 h add) is	13	09	12
Right Ascension of the Sun substract	3	55	00
Virgins Spick South at night	9	14	12

And if the Rising or setting be required, take out the Semidiurnal Arch of the said Star, and substract for the Rising and add for the setting to or from the southing before found, so have you the Rising and setting given.

EXAMPLE.

		h	'	"
Time of Southing as before		9	14	12
Semidiurnal Arch	for the Rising substract	5	3	11
	for the setting Add			
Virgins Spick Rises afternoon at		4	11	01
Virgins Spick sets next morning at		2	17	23
